Water Resistant Wainscoting for Bathroom Design

Made entirely from high strength PVC composite, Plastpro Inc.'s pre-finished reversible vinyl wainscoting is ideal for bathroom design, as well as other heavily trafficked areas of modern homes. Unlike traditional wood wainscoting, Plastpro vinyl wainscoting is perfect for damp areas of the home. It's 100 percent moisture resistant, which prevents problems with mold or mildew. It also protects sheetrock, keeping walls from warping, corroding and rotting. As an added benefit to homeowners, Plastpro vinyl wainscoting is very easy to clean.

"For contractors, architects and homeowners

looking for a simple way to enhance and protect walls, installing vinyl wainscoting is an

effective solution," said Franco An, president of Plastpro, Inc. "Our advanced technology has allowed us to manufacture a unique wainscoting that's not only strong and affordable, but looks fabulous. It's perfect for kitchens, basements, and bathrooms, and from a maintenance standpoint, an outstanding investment."

Plastpro vinyl wainscoting panels are available in a wide array of styles, pre-cut from 36 to 96 inches long. The product is reversible, with each side of the product featuring different designs that actually complement each other. Homeowners who choose to do so can utilize both sides of their wainscoting to create patterns and interesting looks in the rooms where the product is being used.

Installing Plastpro vinyl wainscoting is simple, and can be done in any bathroom. Homeowners or contractors simply start by applying a decorative base trim to the wall that is pre-grooved. Next, pieces of the pre-cut wainscoting are inserted into the base trim. Finally, a pre-grooved decorative chair rail is applied at the top. You can have beautiful vinyl finish trim installed in no time at all with this simple, three-step process.
