

## **Plastpro Adds Arch and Radius Top PF™ Frames and Line of Accessories**

*New Trim Styles, Molding Options, and Decorative Accent Pieces Also Available*

**LIVINGSTON, NJ – January 24, 2008** – Plastpro, Inc., a leading supplier of fiberglass doors and home products in the United States, announced that it has expanded its line of door framing solutions through the addition of new Arch and Radius PF™ Frames. The frames are the company's latest installments in a growing line of poly-fiber doorframes that complement a new generation of fiberglass entry doors.

Offering a superior level of rigidity that eliminates the need for an aluminum support channel, the Arch and Radius top frames are made from a poly-fiber composite that delivers twice the screw-holding power of regular wood. The new frames are compatible with the curved top Plastpro doors currently in the marketplace, and are available through major door distributors and dealers. With custom fit doors and frames, reduced airflow helps to create an even more energy-efficient home.

"We're very pleased to offer the new curved top PF™ Frames to our customers, and are committed to continuing to develop doors and accessories that combine the strength of fiberglass with a variety of style options," said Franco An, president of Plastpro.

### ***New Molding Options***

In addition to the frame options, Plastpro is also introducing several new trim styles, molding options, and decorative accent pieces. Key among the new offerings is complete collection of accent trim, for both classic and contemporary tastes. In addition to resisting moisture, rot, and insects, all of the trim and molding products are either embossed, ready for staining, or pre-primed for immediate painting.

Plastpro has also developed a new line of Dentil Shelves that comes in 4- and 16-block styles. Intended to accent the area below glass panels on any Craftsman style door, they are made of lightweight, high-density polyurethane; are easy to install, will not crack or warp, and resist the effect of ultra-violet rays when properly coated. Dentil Shelves are also available in a stainable woodgrain or ready-to-paint primed finish.

"Plastpro's commitment to research and development has helped refine the closed cellular structure that ensures doors, jambs, trim, and frames will not warp, rot, or split," commented Mr. An. "The bottom line is that we've been able to manufacture and guarantee products that maintain their integrity for a lifetime."
