

PLASTPRO SHOWCASES NEW DOOR DESIGN AT INTERNATIONAL BUILDER SHOW

True White Oak Fiberglass Minimizes Scratches for Long-Lasting Elegance

LIVINGSTON, NJ – February 6, 2007 – Plastpro, Inc., a leading supplier of fiberglass door products in the United States, announced that it will showcase its new True White Oak fiberglass door at the International Builder Show in Orlando, Florida (February 7-10).

Made with UV-Protected Skin and Plastpro's exclusive Hydroshield Technology™, the True White Oak features a completely pure white interior to hide the scrapes and scratches that are often visible with wood and metal doors. Additionally, the doors resist rusting and rotting; have virtually maintenance-free durability for nearly any climate, and do not need to be painted unless desired.

"The True White Oak is an amazing door that continues to grow in popularity," commented Franco An, president of Plastpro. "Our customers are not only drawn to their strength, but their ability to retain beauty and color despite everyday wear and tear."

An noted that over the past few years fiberglass doors have become a popular choice, representing over 2.5 million of the 14.5 million doors sold in the United States in 2004. "Fiberglass doors combine the warmth and texture of real wood with the durability of metal," he said. "Most importantly, they don't have the inherent problems that are often associated with wood and metal."

He added that their ability to insulate combined with being maintenance free makes fiberglass doors an extremely cost effective investment.
