

KNOW THE BEAUTY OF INNOVATION

Plastpro re-building Birmingham, Alabama

Plastpro, Inc., a long term partner of Habitat for Humanity, helps rebuild homes by donating fully assembled fiberglass door units to regions that are underprivileged or struck by natural disasters. Plastpro actively contributes materials to rebuild safe homes and to improve living conditions for those in need.

As part of its social responsibility, Plastpro Inc. proactively reaches out to non-profit organizations such as Habitat for Humanity to donate products and encourages similar organizations to contact them when in need. The latest donation of fiberglass entry door units was to Habitat for Humanity, Birmingham, Alabama, to rebuild those homes that were destroyed by the massive tornado that ripped through the city in April 2011. Together, with its local distributor **Barnett Millwork** in Theodore Alabama, Plastpro was able to make the first donation to the shattered region.

"We can't imagine the amount of pain and loss these families are going through but by donating materials, we can at least help rebuild a place they can soon call home again. This is Plastpro's first donation for this region and we will not end it here", said Peini Spinazzola, Plastpro Marketing Manager.

"Our hearts and prayers went immediately to those who suffered from the tragic consequences of this spring's violent storms. When presented with the opportunity to help in a real way to those in need the Barnett Millworks family felt blessed to say yes, what can we do. I know the recipient families were blessed when they saw those helping begin to rebuild their homes but the true blessing is to be able to respond to the need. Our Lord Jesus provided for us to be able to help so we consider our part a praise to Him. It truly is more joyous to give than receive" said Dan Barber, Executive VP at Barnett Millwork.

In 2010 Plastpro donated over 600 entry door units to Habitat for Humanity, Ashtabula County OH, Habitat for Humanity, Greater Los Angeles and World Vision. Plastpro's door is open to organizations involved in similar activities. To submit request for donation please contact

Plastpro Bio

Since 1994, Plastpro Inc., headquartered in Los Angeles has been a leading manufacturer of fiberglass entry doors in the United States.

Plastpro fiberglass entry door systems are fabricated with Hydroshield Technology™ to provide superior durability and resist weather related damages such as rot, warp and splinter. All around composite stiles and rails prevent moisture from penetrating the foam core.

In addition to entry doors, Plastpro manufactures other exceptional building products such as composite PF Frames™ made with 100% post consumer wood waste, PVC wainscot and Trim Board.

Plastpro's innovative approach has led to several award winning products and recognitions such as the Crystal Award 2009 by Window & Doors for its groundbreaking Trimmable door and for second consecutive year Plastpro is selected by Builder News as Best Products Winner, 2010 for its Fire-rated & Waterproof Composite Entry System unit.
